

fast,
flexible,
innovative

Welcome to Kelheim Fibres GmbH

We are delighted that you wish to learn a little more about the work we do.

You will be amazed at how often you have come into contact with our products in your everyday life – without knowing it.

For almost 70 years, the Kelheim site has been producing fibres of the highest quality for a hugely diverse range of applications – from tea bags and tampons to elegant evening dresses or sports clothing.

Our strengths lie in a broad range of products and our offer of services that focus on meeting the specific needs of every customer.

Perfect products of natural origin

Our products have their origins in managed plantations, where controlled cultivation and sustainable management combine to produce an ecologically sound raw material: eucalyptus trees. Within a few years these forest giants reach the optimum size and are harvested and processed to manufacture pure cellulose. In Kelheim we process this cellulose to produce high quality viscose speciality fibres.

Purity and absorbency are natural properties of viscose fibres – during the manufacturing process the natural cellulose in wood pulp

is converted to a fibre which is flexible and soft to the touch, finally delivering a product which is engineered to meet customer needs yet natural in origin. Our viscose fibres are 100% biodegradable. So our products help meet the growing consumer requirements for environmentally friendly products – and help to preserve the environment for future generations.

Viscose fibre production in Kelheim meets all local and EU requirements and is ISO 9001:2000 certified.

VILOFT®

VILOFT® nonwoven

Natural functionality

A natural source
of inspiration

VILOFT®

VILOFT is a speciality viscose fibre which brings functionality in a wide range of clothing applications. It has been specifically engineered for use in breathable thermal garments, such as thermal sports underwear.

The versatility of VILOFT allows the production of fashionable soft flowing fabrics for sports, leisure and fashion wear.

VILOFT® nonwoven

Our viscose speciality VILOFT Nonwoven is used in the manufacture of wet wipes which are exceptionally comfortable in use and environmentally friendly at the same time.

The unique cross section of the fibre aids quick disintegration of the wipes after disposal. As with all our fibres, VILOFT Nonwoven is 100% biodegradable, allowing the creation of modern and comfortable yet absolute environmentally friendly products.

GALAXY®

The world
market leader

making the difference

DANUFIL®

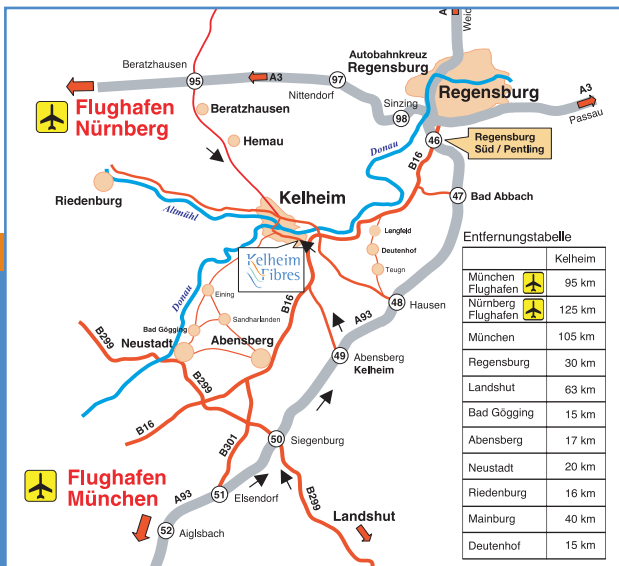

DANUFIL fibres are processed into yarns and fabrics for fashionable clothing and home furnishings such as curtains or table linen.

DANUFIL fibres also suit a whole range of nonwoven products such as tea bags, plasters, sanitary towels and other hygiene products.

GALAXY®

The leading cellulosic fibre for all applications where increased absorbency is required.

GALAXY is the world's leading fibre for the tampon industry and can be used in all types of nonwoven processes and products.
